

Wednesday's Child  
 KTTV FOX 11 News  
 Every Wednesday & Sunday Night @ 10:00pm  
 Air Date: April 2 & 6, 2014  
<http://bit.ly/FOX11Child>

A little shy at first but quick to warm up, this week's Wednesday's Child is athletic and sports-minded. But sports alone do not define Curtis (2004) and his interests – he also has an aptitude for math and an adroitness for Lego engineering! And with that last skill-set in mind, we “rolled” on over to Rolling Robots in Glendale, California to meet up with owner and aerospace scientist Dr. George Kirkman, better known as “Dr. K”, for a robot build with Curtis.

Building a good robot takes both smarts and creativity and Curtis was quick to exhibit such dexterity. Curtis was receptive to the one-on-one guidance from Dr. K during the build of his 'bot while also flashing a proud smile when his own ingenuity showed through.

Combine Curtis' natural talents with the right support and opportunities and the results could surely be amazing! Curtis needs a family that can help him process the things that have taken place in his short life so far, give him a place and sense of security from which he can re-boot when needed and encourage him to roll on into all that he was created to be! To learn more about Curtis and about adoption, tune into Wednesday's Child and then call 866-921-ADOPT (2367).
